

Lab-4 VibeCoding – Chat History

Repository: 64_fruit_catcher

Purpose: Record of the prompts and coding changes used to complete the four README tasks.

Task 1 – Fix missed fruit scoring

Prompt: Fix the fruit-catcher bug so that when a fruit is missed, the score does not increase. Instead, decrease lives by 1. When lives reach 0, show GAME OVER. Catching a normal fruit should increase score by 1.

Task 2 – Rotten fruit hazard

Prompt: Add a rotten fruit/bomb hazard. It should appear differently from normal fruit. If the player catches it, decrease lives by 1 and do not increase the score. Keep the existing normal-fruit scoring.

Task 3 – Dynamic difficulty

Prompt: Add dynamic difficulty. As the score increases, reduce the fruit spawn delay and increase fruit falling speed. Keep reasonable minimum/maximum limits so the game remains playable.

Task 4 – Splash particle effects

Prompt: Add splash particle effects when a fruit is caught by the basket and when a fruit reaches the floor. Keep the existing scoring, lives, rotten-fruit behavior, and dynamic difficulty unchanged.

Testing

Verification: Task 1 was tested for missed-fruit life deduction. Task 2 was tested with rotten fruit. Task 3 was tested and the fruits became faster as the score increased. Task 4 was tested and splash particles appeared both when fruits were caught and when they were dropped.

Git commits

Separate commits created:

1. b0622f9 – Fix missed fruit scoring and life deduction
2. bd77897 – Add rotten fruit hazard
3. a321850 – Add dynamic difficulty progression
4. a2ebf92 – Add splash particle effects

Deliverables: BEFORE video, AFTER video, updated code, and this chat-history PDF.
